

PowerScout™ HD Series

Calibration Stability and
Traceability Statement

June 2020

The robust, inherently stable electrical design makes **PowerScout HD Series** meters highly resistant to aging and drift phenomena that cause calibration errors. Our experience with this device indicates that the calibration of the **PowerScout HD Series** remains within the manufacturer's specifications for a minimum of three years, and in most cases factory recalibration is never required.

The calibration of each **PowerScout HD Series** meter is traceable to the National Institute of Standards and Technology (NIST).
